01 / EXECUTIVE SUMMARY

Current release awaits human approval.

Snapshot of the migration result, distinct from platform feasibility.

● WAITING APPROVAL

● LIVE

PARTIAL LIVE COVERAGE

REL-2026.10-DEMO01 for **customer-profile** has passed GitHub validation and was submitted to ODC as batch **2000015**. The implementation PR is merged.

OWNER and DBA approval evidence remains incomplete. The ODC batch exists. Human approval is incomplete. No migration stage has executed. No post-migration Oracle verification is available.

The ODC practical platform is ready for an internal pilot. Historical execution evidence retention passed. Failure and correction behavior is demonstrated with explicitly labelled fixtures. Production rollout is not approved.

02 / RELEASE INFORMATION

Release and batch identity

Original source provenance is preserved across later implementation commits.

The approval gate is still open.

An executing approval node is pending review. Completed independent role and actor evidence is required to claim approval.

Actual runtime: WAITING APPROVAL.

All targets are registered. No migration start/end times or completed executions exist for this batch. ODC uses manual singleton stage order with ABORT and retry 0.

Execution success must be verified in Oracle.

Acceptance checks cover objects, compilation errors, seed rows and the function result. No post-migration checks have run for the current release.

● NOT AVAILABLE

An ODC EXECUTION_SUCCEEDED status alone cannot make this panel green. Preflight checks of the empty namespace do not prove the migration.

Migration evidence; retention proven historically.

Availability of current execution and Oracle results is shown separately from historical retention evidence.

A correction is a new release.

FIXTURE DEMONSTRATION — failure and correction runtime have not run.

REL-2026.10-DEMO02-FAIL · ORA-20042 at SIT

Fixture progression: DEV VERIFIED → SIT FAILED → UAT WAITING → MOCKPROD WAITING. Further rollout stops. No live failure batch exists.

PRESERVED FAILED RELEASE

REL-2026.10-DEMO02-FAIL

CORRECTION REQUIRED

Combined SQL SHA-256 5b696b547fe92034...

SIT fails with ORA-20042 in the fixture. The failed release and its history remain unchanged.

NEW CORRECTION RELEASE

REL-2026.10-DEMO02-FIX

FIXTURE

New combined SHA-256 db645a5be2eac9af...

New hashes

New review

New approval

New execution

Reviewed package exists. Dynamic SQL requires DBA review. Runtime ticket is not created.

Failed history is preserved. A new reviewed release corrects it. The correction fixture verifies all four environments under a new sample batch; no live correction is claimed.

Internal pilot: GO. Current migration: WAITING APPROVAL.

A proven platform does not imply this release has executed.

DECISION	RESULT
ODC Practical Platform	GO FOR INTERNAL PILOT
GitHub Actions Integration	IMPLEMENTED; authenticated handoff pending
Live Happy Migration	WAITING APPROVAL · PARTIAL LIVE COVERAGE
Failure / Correction Runtime	NOT AVAILABLE · FIXTURE demonstrations
Retention	LIVE PASS · historical execution evidence
Production Rollout	NOT APPROVED

Operating and evidence boundaries

This report supports the POC and internal pilot decision.

- OWNER/DBA approval and migration execution remain pending; Oracle preflight is not migration acceptance.
- db-report Actions success proves fixture rendering. Authenticated Actions-to-ODC handoff still needs runner, environment, secrets and original handoff artifact.
- DEV, SIT, UAT and MOCKPROD are four isolated schemas on one Oracle service. MOCKPROD is a simulation environment.
- Failure and correction runtime have not been executed. Their visual demonstrations use repository fixtures.
- ODC manual continuation requires an authorized operator; ABORT/retry 0 is not an automatic approval or Oracle verification gate.
- Static SQL policy is lexical. ODC does not provide Flyway-style migration version ledger/replay, DDL rollback, backup or production readiness.
